

Please do not allow the NAB to eliminate satellite radios ability to provide instant weather and traffic channels. This is not something that is as easily available in our local market. While traveling between Tampa and Orlando we were stopped in traffic on I-4. We tuned into the Orlando traffic station to learn that the tie-up was just a few more miles in front of us. This kept us from going 30 miles out of our way on the frontage roads. Being unfamiliar with the Orlando stations I would have had no way of knowing were to find this same information on a local broadcast station.

Please reject the NAB's petition 04-160!

Sincerely

Carol Sampey
